SPARLI AMAN

AI Engineer · Production LLM Agents, RAG & Voice AI · Python / FastAPI / TypeScript

Haripur, Pakistan (UTC+5) · remote, or relocation with visa sponsorship · hello@sparli.dev · sparli.dev · github.com/Sparli
English C1 (IELTS Academic 7.0) · Builds daily with AI coding tools (Claude Code, Cursor)

PROFILE

AI engineer who ships LLM systems that act on real business data. First AI and data engineer at **Shurq** (UK Amazon-analytics SaaS, founding team since 2022, full-time since Aug 2024), where I led the AI layer: an MCP server used from Claude, ChatGPT and Cursor, and agents that change live ad accounts behind approval gates. Co-founder of **Croncore** (2025), where I work forward-deployed: discovery with client teams, then building and running their agents, RAG pipelines and voice agents myself. Building software since 2019.

EXPERIENCE

Software Engineer (AI & Data), Shurq **Oct 2022 – Present**
UK Amazon-analytics SaaS · Remote · Founding team and first AI and data engineer · part-time during studies, full-time since Aug 2024 · 200+ concurrent users, 21 marketplaces

- **MCP server:** 1,080 tools (29 write actions) over streamable HTTP with scoped API keys, used from Claude, ChatGPT, Cursor and Claude Code. Every write is logged to a changelog and can be undone, with a preview of what will be restored.
- **AI Ad Manager:** rules, workflows and "AI employees" that change bids, budgets and keywords on live ad accounts. All writes pass an approval queue; agents start in Observe mode and act alone only at a trust score of 70+ with three positive measured outcomes, rechecked before every change.
- **Shurq AI assistant:** answers questions on sales, ads and profit with tables, charts and PDF/PowerPoint reports, also by voice in the iPhone app. Grounded in the real columns of uploaded files; streamed answers resume after a dropped connection.
- **Data pipeline (owner):** hourly ingestion from Amazon's Selling Partner and Ads APIs into per-product profit, which every AI feature builds on. Our competitor-sales estimate reached a median error of about 10%, down from 19%.
- Production LLM API with tiered pricing and provider fallback; ML models for ranking and price optimisation with latency and drift monitoring (Prometheus/Grafana).

Co-Founder & CTO, Croncore **Apr 2025 – Present**
AI engineering company · Remote · Agentic, RAG and voice-AI systems for clients in the US, Canada and Europe

- **Own client engagements end to end:** discovery, scoping and estimates, architecture, build, deployment inside the client's systems, and support.
- Internal agent with access to client inboxes that **cannot send email**: proposed actions go to a pending-actions table for human approval (in daily production).
- **Voice agents** with CRM integration and a compliance layer (timezone-aware dialing, DNC scrub, opt-out detection). Diagnosed a client's agent hanging up after four seconds by listening to recordings: a noisy first packet was transcribed as "no" and triggered an end-call rule. Zero false hang-ups after the fix.
- Production **RAG support assistant** (LangChain, LlamaIndex, pgvector) with an LLM query rewriter and live-synced pricing.
- Fine-tuned **F5-TTS for Mongolian**, a low-resource language (client-owned model), including a fix to its text tokenizer, and adapted the output to a legacy telephone system.

Freelance AI / ML Engineer (Upwork, Fiverr) **2019 – 2024**
Part-time alongside studies · ML, NLP and SaaS projects for international clients, including a self-hosted speech service (FastAPI, two engines with fallback) plugged into a legacy Asterisk/FreePBX call flow (2024)

OPEN SOURCE

- **leadflow-agent** (github.com/Sparli/leadflow-agent): tool-using agent that turns raw sales enquiries into de-duplicated HubSpot records. The model only proposes; code writes after human approval, to a ledger with one-command undo. Pydantic, strict mypy, CI, secret scanning.
- **sparli.dev:** portfolio built in Astro with its own performance budget enforced in CI (0 B client JavaScript, under 20 KB per page).

SKILLS

LLM & agents: Anthropic Claude API, OpenAI, Gemini, open models · MCP servers, tool calling, agent loops, LangGraph · RAG (LangChain, LlamaIndex, pgvector) · prompt iteration, guardrails and human-approval gates

Speech: Whisper, F5-TTS fine-tuning, ElevenLabs, Twilio, real-time speech-to-speech pipelines with voice-activity detection

Engineering: Python, TypeScript/JavaScript, SQL · FastAPI, Django, Next.js · PostgreSQL, BigQuery · Docker, GitHub Actions · AWS, Azure, Cloudflare · AI coding tools daily (Claude Code, Cursor)

Client work: requirements workshops, scoping and estimates, phased delivery, stakeholder reporting

EDUCATION

BSc Software Engineering, Pak-Austria Fachhochschule (PAF-IAST), Haripur · anabin H+ **2020 – 2024**
