SPARLI AMAN

Senior AI Engineer · Agentic Systems, Integrations & Data Pipelines

hello@sparli.dev | sparli.dev | github.com/Sparli | linkedin.com/in/sparli-aman
Remote as an employee or contractor, or **relocation** to Ireland, the EU or the UK with visa sponsorship

Senior AI engineer with seven years of shipping production software. For the last four I have led AI and data engineering at **Shurq**, a UK Amazon-analytics SaaS, from idea stage to a paid product with **200+ concurrent users**. I build agents that take real actions in business systems (ad platforms, CRMs, phone systems) behind approval gates, and the data pipelines they run on. I want to go deep on one product with one team.

EXPERIENCE

Shurq · Founding AI & Data Engineer, leading AI and data engineering Jul 2022 – present

UK SaaS, remote · Amazon seller analytics and ad automation (shurq.com) · joined at idea stage; now a paid product with a 10+ person team, 200+ concurrent users and 21 marketplaces

- **Own the data pipeline** that pulls Amazon sales, fee and ad data every hour (SP-API, Ads API) and turns it into true per-product profit across **21 marketplaces**. Every dashboard, alert, report and AI agent in the product reads from it.
- **Led and built the MCP server: 1,080 tools, 29 of them write actions**, over streamable HTTP with scoped API keys, so sellers query and act on their live Amazon accounts from Claude, ChatGPT, Cursor or Claude Code. It is also the tool layer behind the product's AI employees.
- **Led and built the AI Ad Manager:** rules, scheduled workflows and an approval queue for bid, budget and keyword changes. Every change is logged and reversible, and an AI employee acts alone only after earning a trust score of 70+ with three measured positive outcomes.
- **Kept AI features up through provider outages** with fallback from self-hosted Ollama to OpenAI, so an outage costs latency, not the feature.
- **Led Shurq AI, the Data API and Creative Studio:** a chat assistant that answers questions on a seller's own data with tables, charts and PDF/PowerPoint reports; a versioned partner REST API (OpenAPI spec, async jobs); and listing-image generation grounded in the niche's real CTR and conversion data.

Python · TypeScript · PostgreSQL · BigQuery · MCP · Amazon Ads & Selling Partner APIs · OpenAI · Ollama · AWS

Croncore · Founder & Lead Engineer, AI engineering consultancy Jan 2025 – present

Clients in the US, Canada, Saudi Arabia and Mongolia · usually the sole engineer, from scoping to production support

- **Bilingual AI learning platform (Québec EdTech client, in pilot):** took raw requirements to two shipped products. A learner app that generates lessons, quizzes and reflections by grade, language and pace, with a paid tier on Stripe, and role-based dashboards for school networks, schools, teachers and parents. EN/FR, data hosted in Canada. I designed both and built most of the core with a small team.
- **Cut text-rendering errors in generated lesson images by ~80%** across 8 EN/FR test scenarios by reworking prompts and text handling, with no model change and no added cost or latency. An EN/FR-parity Playwright suite blocks any release where either language regresses.
- **Voice agents that act in the CRM mid-call** for a US payment-services client (sole engineer) and a Canadian SEO SaaS: Pipedrive dedupe and deal creation, callback scheduling, 10-scenario follow-up email routing, and an SMS tool that sends a document during the call. Compliance built in: dialling windows, DNC scrubbing, opt-out detection, consent logging, CASL.
- **Stopped early hang-ups** by listening to live recordings and tracing them to speech-to-text hearing "hello" as "no", then adding a never-end-on-first-turn rule. Fixed response latency by moving the conversation model to claude-haiku-4-5.
- **Arabic (Saudi-dialect) inbound sales agent** live on web and phone: about 0.5 s responses, model fallback (gpt-oss-120b to Llama 3.3 on Groq) plus a scripted fallback, so a live call never goes silent.
- **Delivery agent with write access, made safe:** triages GitHub PRs, tracks ClickUp tasks and drafts client reports over the Anthropic API and Claude Agent SDK. Every outbound action waits in a `pending_actions` table for a human, and each run is scoped to one client project.

Python · TypeScript · Next.js · Django/DRF · PostgreSQL · Anthropic API · Claude Agent SDK · Twilio · ElevenLabs · Groq · Gemini · Stripe · Playwright

Freelance AI & Full-Stack Engineer · Top Rated on Upwork 2019 – 2022

AI, ML and full-stack delivery for clients in the US, Europe and the Middle East, with Top Rated status sustained across three years of back-to-back projects.

OPEN SOURCE & OTHER BUILDS

- **leadflow-agent** (public, github.com/Sparli/leadflow-agent): turns an inbound enquiry into de-duplicated HubSpot records. A human approves each write, every action goes to a ledger with one-command undo, and it costs under $0.002 per lead. CI runs strict mypy and gitleaks.
- **Speech service into an existing phone system** (Mongolian client): FastAPI service with two speech engines behind one interface and fallback between them, matched to the client's Asterisk/FreePBX audio format so nothing on their side changed.
- **Also:** offline-first retail POS (Tauri/Rust and React, ~380 automated tests); live speech-to-speech translation with latency shown on screen; an MCP coordination server for coding agents; a multi-user time tracker on Cloudflare Workers/D1; led a retrieval agent that quotes live prices from an automotive client's own data (pgvector).

SKILLS

Languages	Python · TypeScript/JavaScript · Node.js · SQL · Rust (Tauri)
Agentic & LLM	MCP servers · tool-using agents · Anthropic API & Claude Agent SDK · OpenAI · Gemini · Groq · Vercel AI SDK · structured outputs · RAG (pgvector) · provider fallback · human-in-the-loop approval gates · prompt-injection containment · eval design
Voice	ElevenLabs Conversational AI · Twilio voice/SMS · Deepgram · Whisper · Synthflow · Vapi · Asterisk/FreePBX
Backend & data	FastAPI · Django/DRF · Next.js · PostgreSQL · BigQuery · Redis · Celery · Drizzle · SQLite · scheduled data pipelines · rate limiting and backoff
Cloud & ops	AWS · GCP · Vercel · Render · Cloudflare Workers/D1 · Docker · GitHub Actions CI · Playwright · pytest
Integrated with	Amazon Ads & SP-API · HubSpot · Pipedrive · ClickUp · GitHub · Gmail · Google Sheets/Places · Stripe

EDUCATION

BSc Software Engineering, PAF-IAST
